Final Project

:

20161222 나경훈

Concept

We often watch TV, Netflix, Youtube and Webtoon right before we go to sleep.

And It's annoying to manipulate a remote control or a cell phone by hand.

Also, bright light is not good for eyes.

So I want to make a dark-mode

with simple motion manipulate.

Aim

Enable to receive a variety of input.
-> input : cellphone gravity, cellphone proximity, face info.

Make a practical program.
-> easy to learn.

Use machine learning to classify.
-> with wekinator, I train data set.
